WELCOME TO THE CHEAT CODE

You now have access to 1,100 fill-in-the-blank AI prompt templates across 11 books. But knowing *how* to use them — and understanding **why** certain prompts produce stunning results while others produce average ones — will 10x your output quality.

This bonus guide is your **master class in AI image creation**. You'll learn the science behind great prompts, discover the style keywords professionals use, see real before/after transformations, and finish with 10 practice prompts to apply everything immediately.

Read it once. Reference it whenever you create. Your images will never be average again.

Not all AI image tools are equal — each has unique strengths. Using the right tool for your goal is half the battle. Here's the honest breakdown:

TOOL	BEST FOR	EASE OF USE	REALISM	PRICE	ACCESS
Midjourney	Artistic portraits, fantasy, concept art — highest overall quality	MEDIUM	★★★★★	\$10/mo+	Discord
ChatGPT (DALL·E 3)	Beginners, conversational editing, anything + everything	EASIEST	★★★★★	\$20/mo (Plus)	Web/App
Adobe Firefly	Commercial use, product images, copyright-safe	EASY	★★★★★	Free tier	Web/Photoshop
Ideogram	Text inside images, typography, logos, posters	EASY	★★★	Free tier	Web
Stable Diffusion	Custom styles, full control, fine-tuning, no censorship	ADVANCED	★★★★★	Free (self-host)	Local/Web

Quick Rule: For portraits and art — Midjourney. For fast iteration and beginners — ChatGPT. For commercial/product work — Firefly. For text in images — Ideogram. For complete creative control — Stable Diffusion.

Every stunning AI image is built from the same 6 ingredients. Master these and you'll never write a weak prompt again.

01 · SUBJECT

Who or What

The main focus. Be specific — age, gender, ethnicity, expression, clothing, object type, material.

e.g. "a 25-year-old Indian woman in a red saree"
"a matte black ceramic coffee mug"

02 · STYLE

Art or Photo Style

The visual language. Defines whether it looks like a photo, painting, illustration, or film frame.

e.g. "Studio Ghibli animation"
"cinematic photography, film grain"

03 · LIGHTING

Light Source & Quality

Lighting is everything. It determines mood, depth, and whether the image looks professional or flat.

e.g. "golden hour, warm side lighting"
"dramatic studio rim lighting, soft diffused"

04 · MOOD

Atmosphere & Emotion

Tells the AI the emotional quality to aim for. Separates forgettable from unforgettable images.

e.g. "ethereal and dreamlike"
"dark, moody, tension-filled"
"warm, joyful, nostalgic"

05 · CAMERA

Lens, Angle & Shot Type

Specific camera language instantly elevates image realism and composition quality.

e.g. "85mm portrait lens, shallow depth of field"
"drone overhead wide angle, Sony A7R IV"

06 · QUALITY

Technical Quality Boosters

Signal the quality level. These words activate the AI's highest detail modes.

e.g. "photorealistic, 8K, award-winning"
"highly detailed, professional photography"

SUBJECT + STYLE + LIGHTING + MOOD + CAMERA + QUALITY =
STUNNING IMAGE

The 11 prompt books do this for you automatically. Every template already has all 6 building blocks pre-wired. Your job is just to fill in the variables — the formula is built in.

✗ Mistake 1 — Being Too Vague

"A woman" tells the AI almost nothing. It has to guess everything — age, ethnicity, expression, clothing, setting. Each guess averages out to something generic.

✓ FIX: "A 28-year-old Indian woman, confident expression, silk kurta, warm skin tone"

✗ Mistake 2 — Forgetting Lighting

Lighting is the single biggest factor in whether an image looks amateur or professional. Flat, unspecified lighting makes every image look like a smartphone snapshot.

✓ FIX: Always add one of — golden hour / studio rim lighting / dramatic side light / soft diffused / neon glow

✗ Mistake 3 — No Camera Specification

Without camera language, the AI defaults to a bland, neutral composition. Specifying lens and shot type transforms the image into something that looks genuinely professional.

✓ FIX: Add "85mm portrait lens, shallow bokeh" or "wide angle, drone overhead" to any prompt

✗ Mistake 4 — Conflicting Styles

"Photorealistic cartoon" or "impressionist photograph" confuses the AI and produces muddy, inconsistent results. Pick one lane and stay in it.

✓ FIX: Choose either photorealism OR an illustration style — never both at the same time

✗ Mistake 5 — Too Many Elements

Listing 10+ things in one prompt overwhelms the AI. It tries to fit everything in and produces a cluttered, unfocused composition where nothing looks good.

✓ FIX: One hero subject, one background, 2-3 supporting details. Less is more precise.

✗ Mistake 6 — No Mood or Atmosphere

Without a mood directive, images come out emotionally neutral. They look technically correct but feel empty — like a stock photo nobody asked for.

✓ FIX: Add one mood word — ethereal / melancholic / vibrant / mysterious / warm and nostalgic

✗ Mistake 7 — Using the Wrong Tool

Using ChatGPT for highly stylized art, or Midjourney when you need text inside the image — wrong tool for the job always produces disappointing results.

✓ FIX: Use the tool comparison in Chapter 1. Match your goal to the right platform first.

✗ Mistake 8 — Ignoring Aspect Ratio

Generating a portrait-style image in landscape ratio (or vice versa) wastes half the frame and forces awkward composition. Always set ratio to match your use case.

✓ FIX: Midjourney: `--ar 9:16` (portrait), `--ar 16:9` (landscape), `--ar 1:1` (square)

These are the exact words professionals use to elevate AI image quality. Bookmark this page. The teal highlighted ones are the highest-impact single words you can add to any prompt.

The 11 books contain 1,100 ready-to-use templates. Here's how to squeeze every drop of value out of them:

- 1 **Pick the right book for your goal.** Each book covers one specific style. If you want a cinematic movie poster, go to Book 7. Pet portrait? Book 9. Don't browse randomly — go directly to the style you need.
- 2 **Fill in your 6 variables once at the top.** Every book has a setup section at the top. Fill it in once — all 100 prompts update automatically. You don't need to type your name/style into every single prompt.
- 3 **Scan all 100 prompts quickly.** Each prompt covers a different variation, angle, mood, and composition. Scan the full set first before copying — you'll find hidden gems you didn't expect to need.
- 4 **Copy 3–5 prompts and test them.** Paste into your AI tool of choice. Compare the outputs. Your best results usually come from testing a few variations, not just one.
- 5 **Iterate by modifying the copies.** Once you get a result you like, go deeper. Change one word at a time — swap the lighting, change the mood, adjust the camera angle. Small changes create dramatically different images.
- 6 **Cross-pollinate between books.** Take the style/mood language from Book 7 (Cinematic) and apply it to Book 5 (Headshots). The variables are interchangeable — mixing books creates unique styles nobody else has.

 **Pro Tip:** The *setup variables* are just starting points. After you fill them in, manually tweak individual prompts — add specific details like "with freckles", "under cherry blossoms", "wearing vintage sunglasses." The more specific the detail, the more unique your image.

 **Unlimited Combinations:** With 6 variables per prompt and 100 prompts per book, each book technically produces millions of unique image variations. You will never run out of fresh content.

See exactly what changes between a weak prompt and a professional one — and the specific ingredients that make the difference.

TRANSFORMATION 01 · PORTRAIT

FROM GENERIC TO PROFESSIONAL PORTRAIT

✗ WEAK PROMPT

a woman with long hair

✓ PROFESSIONAL PROMPT

a 28-year-old Indian woman, flowing black hair, deep burgundy silk saree, warm confident expression, studio rim lighting with soft fill, 85mm portrait lens, shallow depth of field, photorealistic, 8K

💡 Added: **age, ethnicity, hair detail, clothing material + color, emotion, lighting type, camera lens, depth of field, quality markers**

TRANSFORMATION 02 · PET PORTRAIT

FROM SNAPSHOT TO AWARD-WINNING PET PHOTOGRAPHY

✗ WEAK PROMPT

my dog

✓ PROFESSIONAL PROMPT

a golden retriever puppy, sitting in a sunflower field at golden hour, warm rim lighting, joyful and playful expression, tongue out, Sony 85mm f/1.4, creamy bokeh background, highly detailed fur texture, award-winning pet photography

💡 Added: **breed, age descriptor, environment, time of day, lighting quality, expression, tongue detail, camera specs, bokeh, texture detail, quality tag**

FROM OBJECT TO COMMERCIAL PRODUCT SHOT

✗ WEAK PROMPT

a coffee mug

✓ PROFESSIONAL PROMPT

a minimalist matte white ceramic coffee mug, floating on polished dark slate surface, dramatic side lighting, thin wisp of steam rising, moody and premium atmosphere, macro lens close-up, dark background, 4K commercial product photography

💡 Added: **material texture (matte ceramic), color, surface, lighting direction, steam detail, mood, lens type, background, commercial photography tag**

FROM VAGUE TO DETAILED ANIME PORTRAIT

✗ WEAK PROMPT

anime girl

✓ PROFESSIONAL PROMPT

a young anime girl with silver twin-tails, white school uniform with blue ribbon tie, standing under cherry blossom trees, soft pink bokeh petals falling, Studio Ghibli inspired art style, warm pastel color palette, detailed eyes with light reflections, highly detailed illustration

💡 Added: **hair style + color, outfit details, environment, weather/particles, specific anime style reference, color palette, eye detail, illustration quality**

FROM BORING TO BREATHTAKING LANDSCAPE

✗ WEAK PROMPT

mountains

✓ PROFESSIONAL PROMPT

towering snow-capped Himalayan peaks at sunset, dramatic storm clouds parting to reveal orange and purple sky, wildflower meadow in foreground, a lone figure on a ridge for scale, Canon 16-35mm wide angle lens, cinematic landscape photography, National Geographic quality, 8K

💡 Added: **specific mountain range, weather detail, color sky description, foreground interest, scale figure, lens, photography style, quality reference**

FROM GENERIC TO CINEMATIC POSTER

✗ WEAK PROMPT

action movie poster

✓ PROFESSIONAL PROMPT

cinematic movie poster, lone warrior in black armor standing at cliff edge, burning city below, dramatic storm clouds, lightning striking behind, teal and orange color grade, Hollywood blockbuster style, high contrast, epic wide composition, space for title text at top, photorealistic, 4K

💡 Added: **character description, specific environment, dramatic weather, color grading style, industry reference, contrast level, composition note, text space direction**

FROM FLAT TO EMOTIONALLY CHARGED NOSTALGIA

✗ WEAK PROMPT

old photo of a kid

✓ PROFESSIONAL PROMPT

a 7-year-old boy in 1990s clothes, riding a bicycle down a quiet suburban street on a summer afternoon, golden afternoon light, warm nostalgic atmosphere, polaroid photo style, faded color film, light leaks at edges, dust and grain texture, soft focus edges, 35mm analog photography

💡 Added: **specific age + era clothing, activity + environment, time of day + season, emotional atmosphere, polaroid format, film degradation effects, analog camera style**

FROM PASSPORT PHOTO TO LINKEDIN HERO IMAGE

✗ WEAK PROMPT

a man in a suit

✓ PROFESSIONAL PROMPT

a 35-year-old South Asian man, charcoal grey suit with white shirt, warm approachable smile, soft studio lighting with clean white backdrop, 85mm portrait lens, sharp focus on eyes, natural skin texture, professional LinkedIn headshot style, photorealistic, 4K

💡 Added: **age + ethnicity, clothing color + style, expression, lighting setup + background, lens, focus point, skin texture detail, use-case context (LinkedIn), quality**

MIDJOURNEY

DISCORD

- Use `--ar 9:16` for portrait, `--ar 16:9` for landscape
- Add `--v 6.1` for latest model (most photorealistic)
- Use `--style raw` to reduce over-stylization
- Add `--q 2` for highest quality (slower)
- Upscale your favorite: click U1–U4 below the image grid
- Use `/describe` on any image to reverse-engineer its prompt

CHATGPT (DALL·E 3)

WEB / APP

- Paste prompt *"generate this image"* — no special commands needed
- Use conversational editing: `"make her expression warmer"`
- Say `"keep everything the same but change the lighting to golden hour"`
- Ask for `"a 9:16 portrait orientation"` directly in text
- DALL·E excels at following detailed instructions precisely — more so than Midjourney
- Weakest for highly stylized art — use Midjourney for those

ADOBE FIREFLY

CREATIVE CLOUD

- Best choice for **commercial use** — fully copyright-safe images
- Add `Content Type: Photo` in settings for realism
- Use *Structure* feature to match your the *Reference* composition
- The *Style* feature lets you match any *Reference* image's aesthetic
- Integrates directly into Photoshop's *Generative Fill* — best for editing
- Use `--negative prompt` field to exclude unwanted elements

IDEOGRAM

WEB

- Best tool for **text inside images** — logos, posters, signs, labels
- Add `"with text [YOUR TEXT]"` anywhere in the prompt
- Use `Magic Prompt: ON` for automatic prompt enhancement
- Select *Design* mode for typography-heavy work (posters, thumbnails)
- Free tier gives 10 slow generations/day — enough for testing
- Weakest for photo-realistic faces — use ChatGPT or Midjourney for those

The Professional Workflow: Generate 4–6 variations with Midjourney or ChatGPT → Pick the best one → Upscale it → Import into Adobe Photoshop with Firefly for final touch-ups (background removal, object editing, generative fill). This 3-step pipeline produces commercial-grade results every time.

P · 01 *STARTER — Subject + Style + Quality*

[SUBJECT], [STYLE], highly detailed, professional quality, 8K photorealistic

P · 02 *LIGHTING FOCUS — Adding the lighting layer*

[SUBJECT], [STYLE], dramatic golden hour lighting, soft warm shadows, volumetric light, 8K

P · 03 *MOOD MASTER — Atmosphere-driven composition*

[SUBJECT], [MOOD] atmosphere, [STYLE], soft bokeh, ethereal color palette, award-winning

P · 04 *PORTRAIT FORMULA — Full 6-block anatomy applied*

Studio portrait of [SUBJECT], [STYLE], [MOOD] mood, 85mm portrait lens, shallow depth of field, studio rim lighting with soft fill, photorealistic, 4K

P · 05 *CINEMATIC FRAME — Movie-still treatment*

Cinematic wide shot of [SUBJECT], [STYLE], [MOOD], anamorphic lens flare, teal and orange color grade, 35mm film grain, Hollywood blockbuster quality

P · 06 *DRAMATIC LIGHTING — High contrast, editorial feel*

[SUBJECT], [STYLE], dramatic chiaroscuro lighting, deep shadows, single light source from side, [MOOD] tension, high contrast, masterpiece quality

P·07 NATURE CONTEXT — *Subject within an environment*

[SUBJECT] in a lush forest clearing at dusk, [STYLE], dappled golden light through tree canopy, [MOOD] atmosphere, Canon 50mm, highly detailed, photorealistic

P·08 VINTAGE TREATMENT — *Analog nostalgia*

[SUBJECT], [STYLE], vintage 1990s aesthetic, 35mm film grain, faded colors, light leaks at edges, [MOOD] nostalgia, polaroid photo style, analog photography

P·09 FANTASY / CONCEPT ART — *Epic scale treatment*

Epic concept art of [SUBJECT], [STYLE], [MOOD] environment, magical volumetric lighting, intricate details, fantasy world setting, trending on ArtStation, 8K digital art

P·10 ULTIMATE FORMULA — *All 6 building blocks combined*

[SUBJECT], [STYLE], [MOOD] atmosphere, golden hour side lighting with soft fill, 85mm portrait lens, shallow depth of field, highly detailed, photorealistic, award-winning, 8K - everything working together

YOU NOW HAVE THE CHEAT CODE

You know which tool to use for which job. You understand all 6 building blocks of a perfect prompt. You've seen the before/after transformations. You have 50+ professional style keywords. And you have 10 practice prompts to apply everything immediately.

Now go open your prompt books. Fill in your variables. Copy a prompt. Paste it. And watch what happens when you actually know what you're doing.

Every great AI image starts with a great prompt. You've got the formula. The results are up to you.
